

Simon 270

Make it better, simplify.

simon

Simon 270. Make it better, simplify.

The beauty of simplicity goes far beyond appearance.

The things that make our lives better are simple.

By simplifying, we eliminate excess to highlight what's essential.

Because to be simple is to be honest, intimate, and practical.

Sure, simplicity makes things easier, but it isn't easy to achieve.

At Simon, we've been chasing it for more than 100 years.

And today, we can tell you:

Make it better, simplify.

Simon 270.

SPIRIT

For better integration,
simplify the design.

For a better appearance,
simplify the concept.

ICON DESIGN

Simon 270 presents Icon, a reinvented design. With a neutral and unobtrusive design, it blends into any space, so it seems like it's been there all along.

Icon's design is authentically timeless, even the connected version.

MINIMA DESIGN

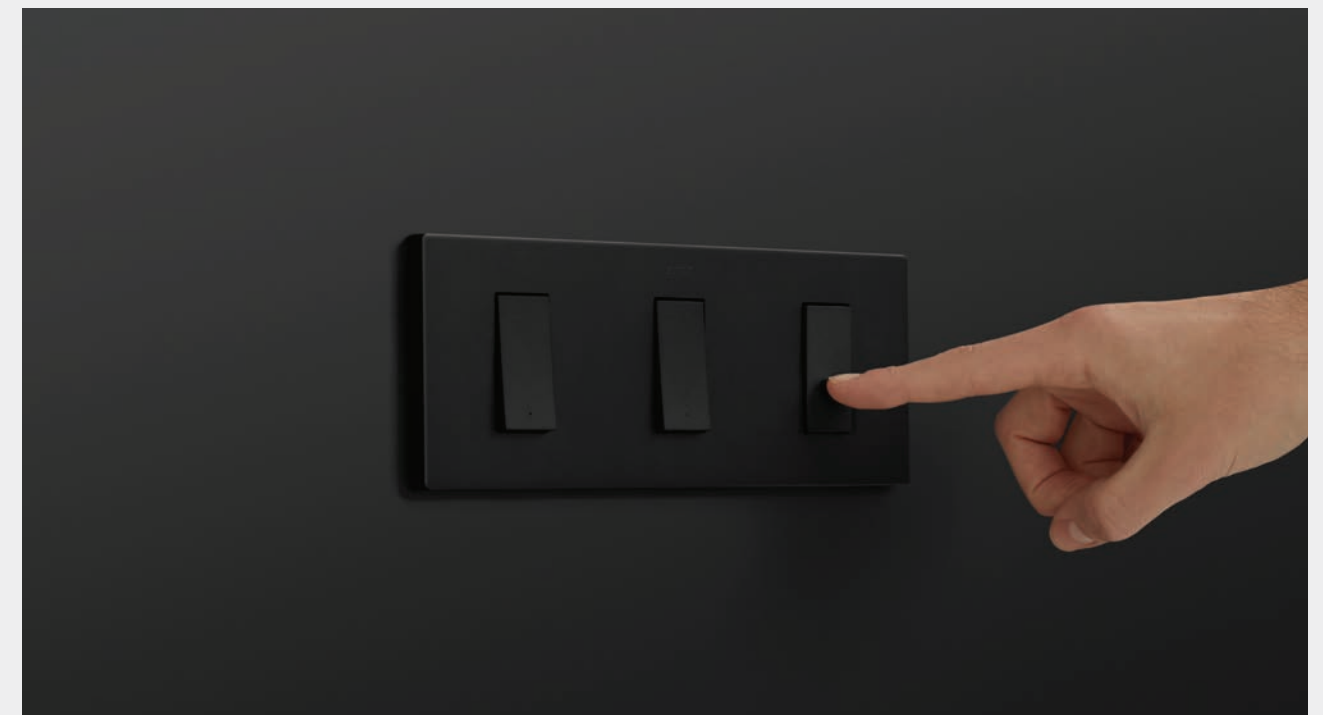

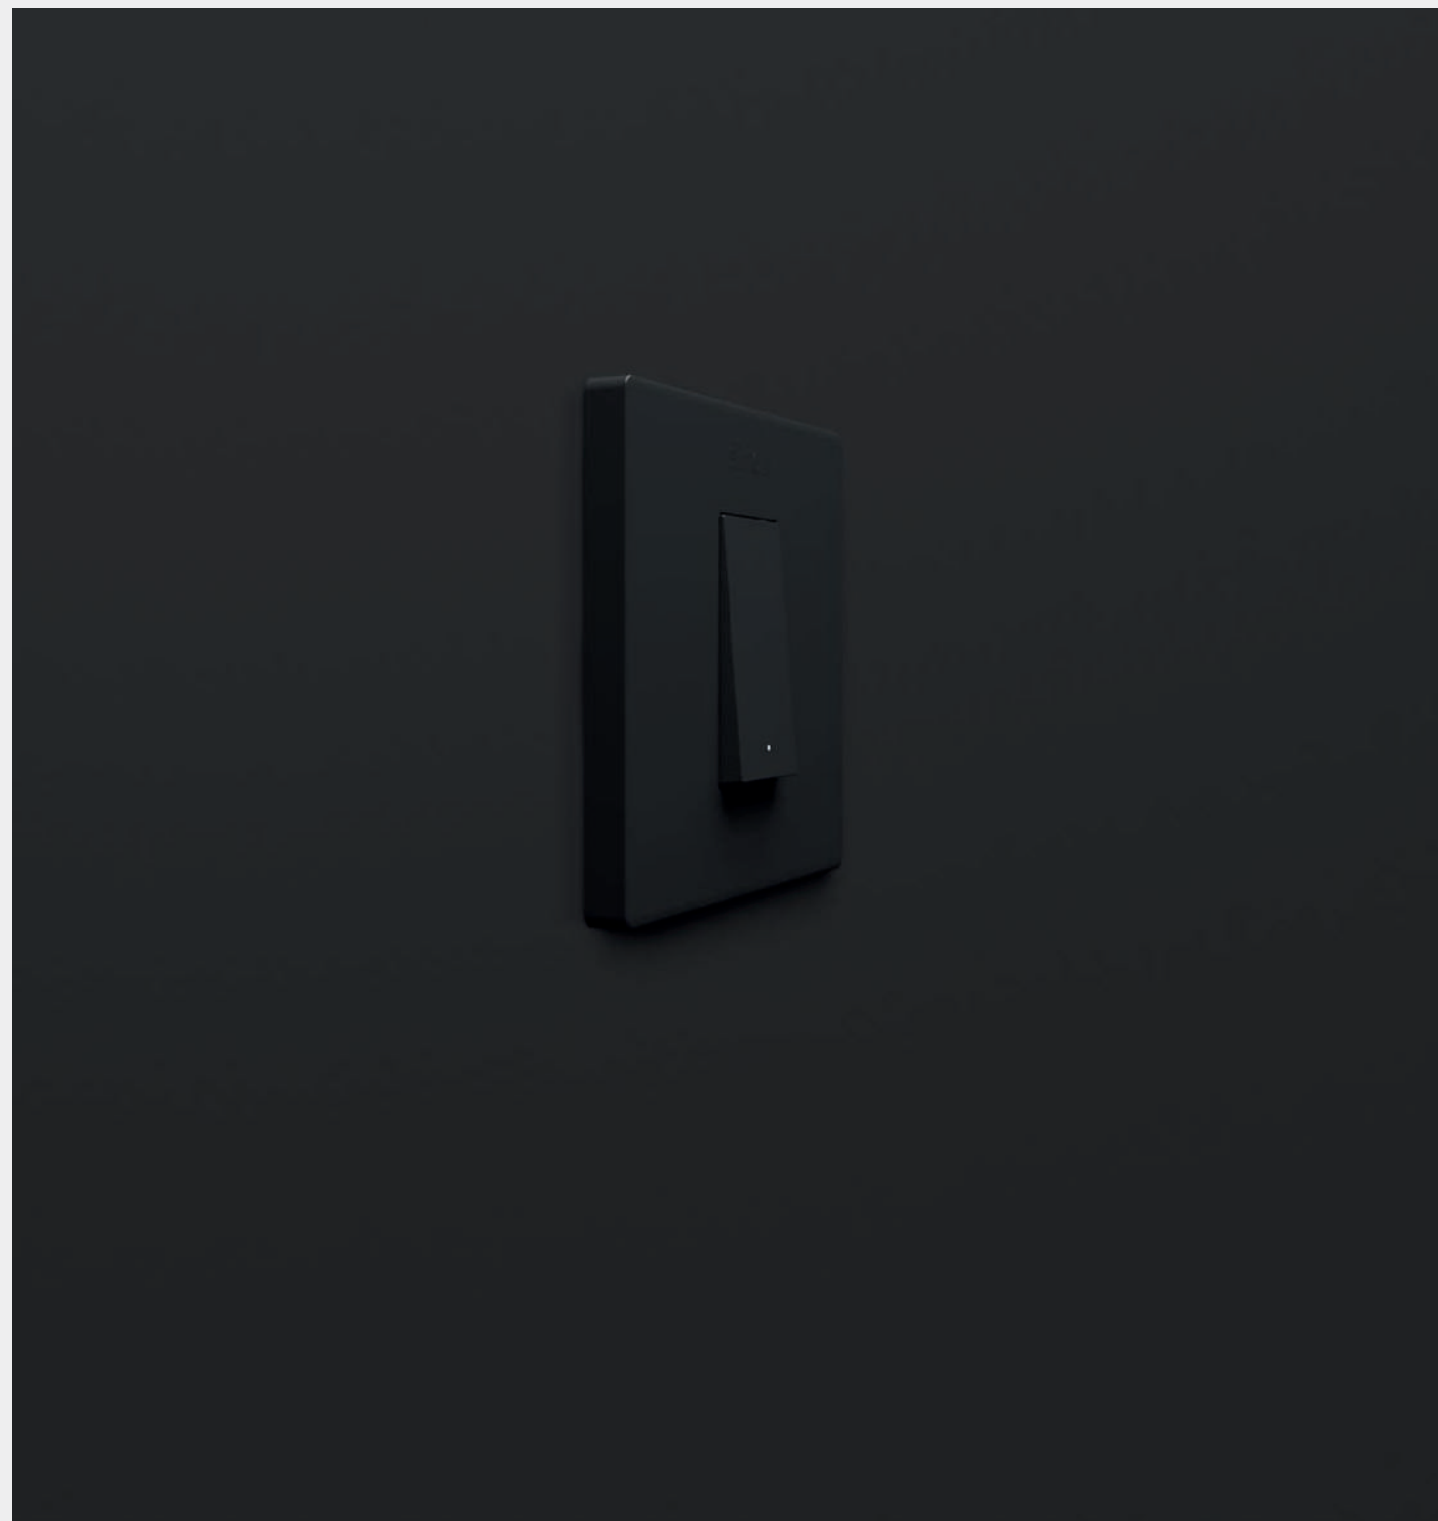

The best designs are the least designed. That's Minima. It has a smooth rocker and a CLEAN schuko that's level with the wall, for minimal intrusion and maximum functionality while resisting dirt.

One smooth and continuous surface where the joints are almost imperceptible. The maximum expression of minimalism.

For better use, simplify the mechanism.

Simplification means getting rid of the extras. That's why we've removed all unnecessary elements, reducing the frame thickness by up to 35% and removing all types of ridges. That way, the frame seamlessly integrates into the wall,

along with the mechanisms, socket outlets and even the other frames. The finishes and materials have been standardised, for a light but heavy-duty design on both the frames and the rockers.

100% TOUCH

Practicality and appearance aren't at odds. In this collection, the different control mechanisms have the same usability and **progressive touch functionality**. The entire rocker surface is used and has a very pleasant, **uniform feel** with a

short and precise stroke. Plus, their **100% touch** mechanism means the rockers return to their **original positions**, so they're always in **perfect order** and harmony.

CLEAN SCHUKO

For a better socket,
simplify its spirit.

CLEAN SCHUKO

The key to the elegance of the new Simon 270 CLEAN schuko is its simplicity. Its design goes beyond appearance to improve people's quality of life. CLEAN has reinvented the conventional socket format to incorporate a **flat surface** that's flush with the wall for total integration that keeps it **cleaner**.

MAGNETIC AUTO-COVER SYSTEM

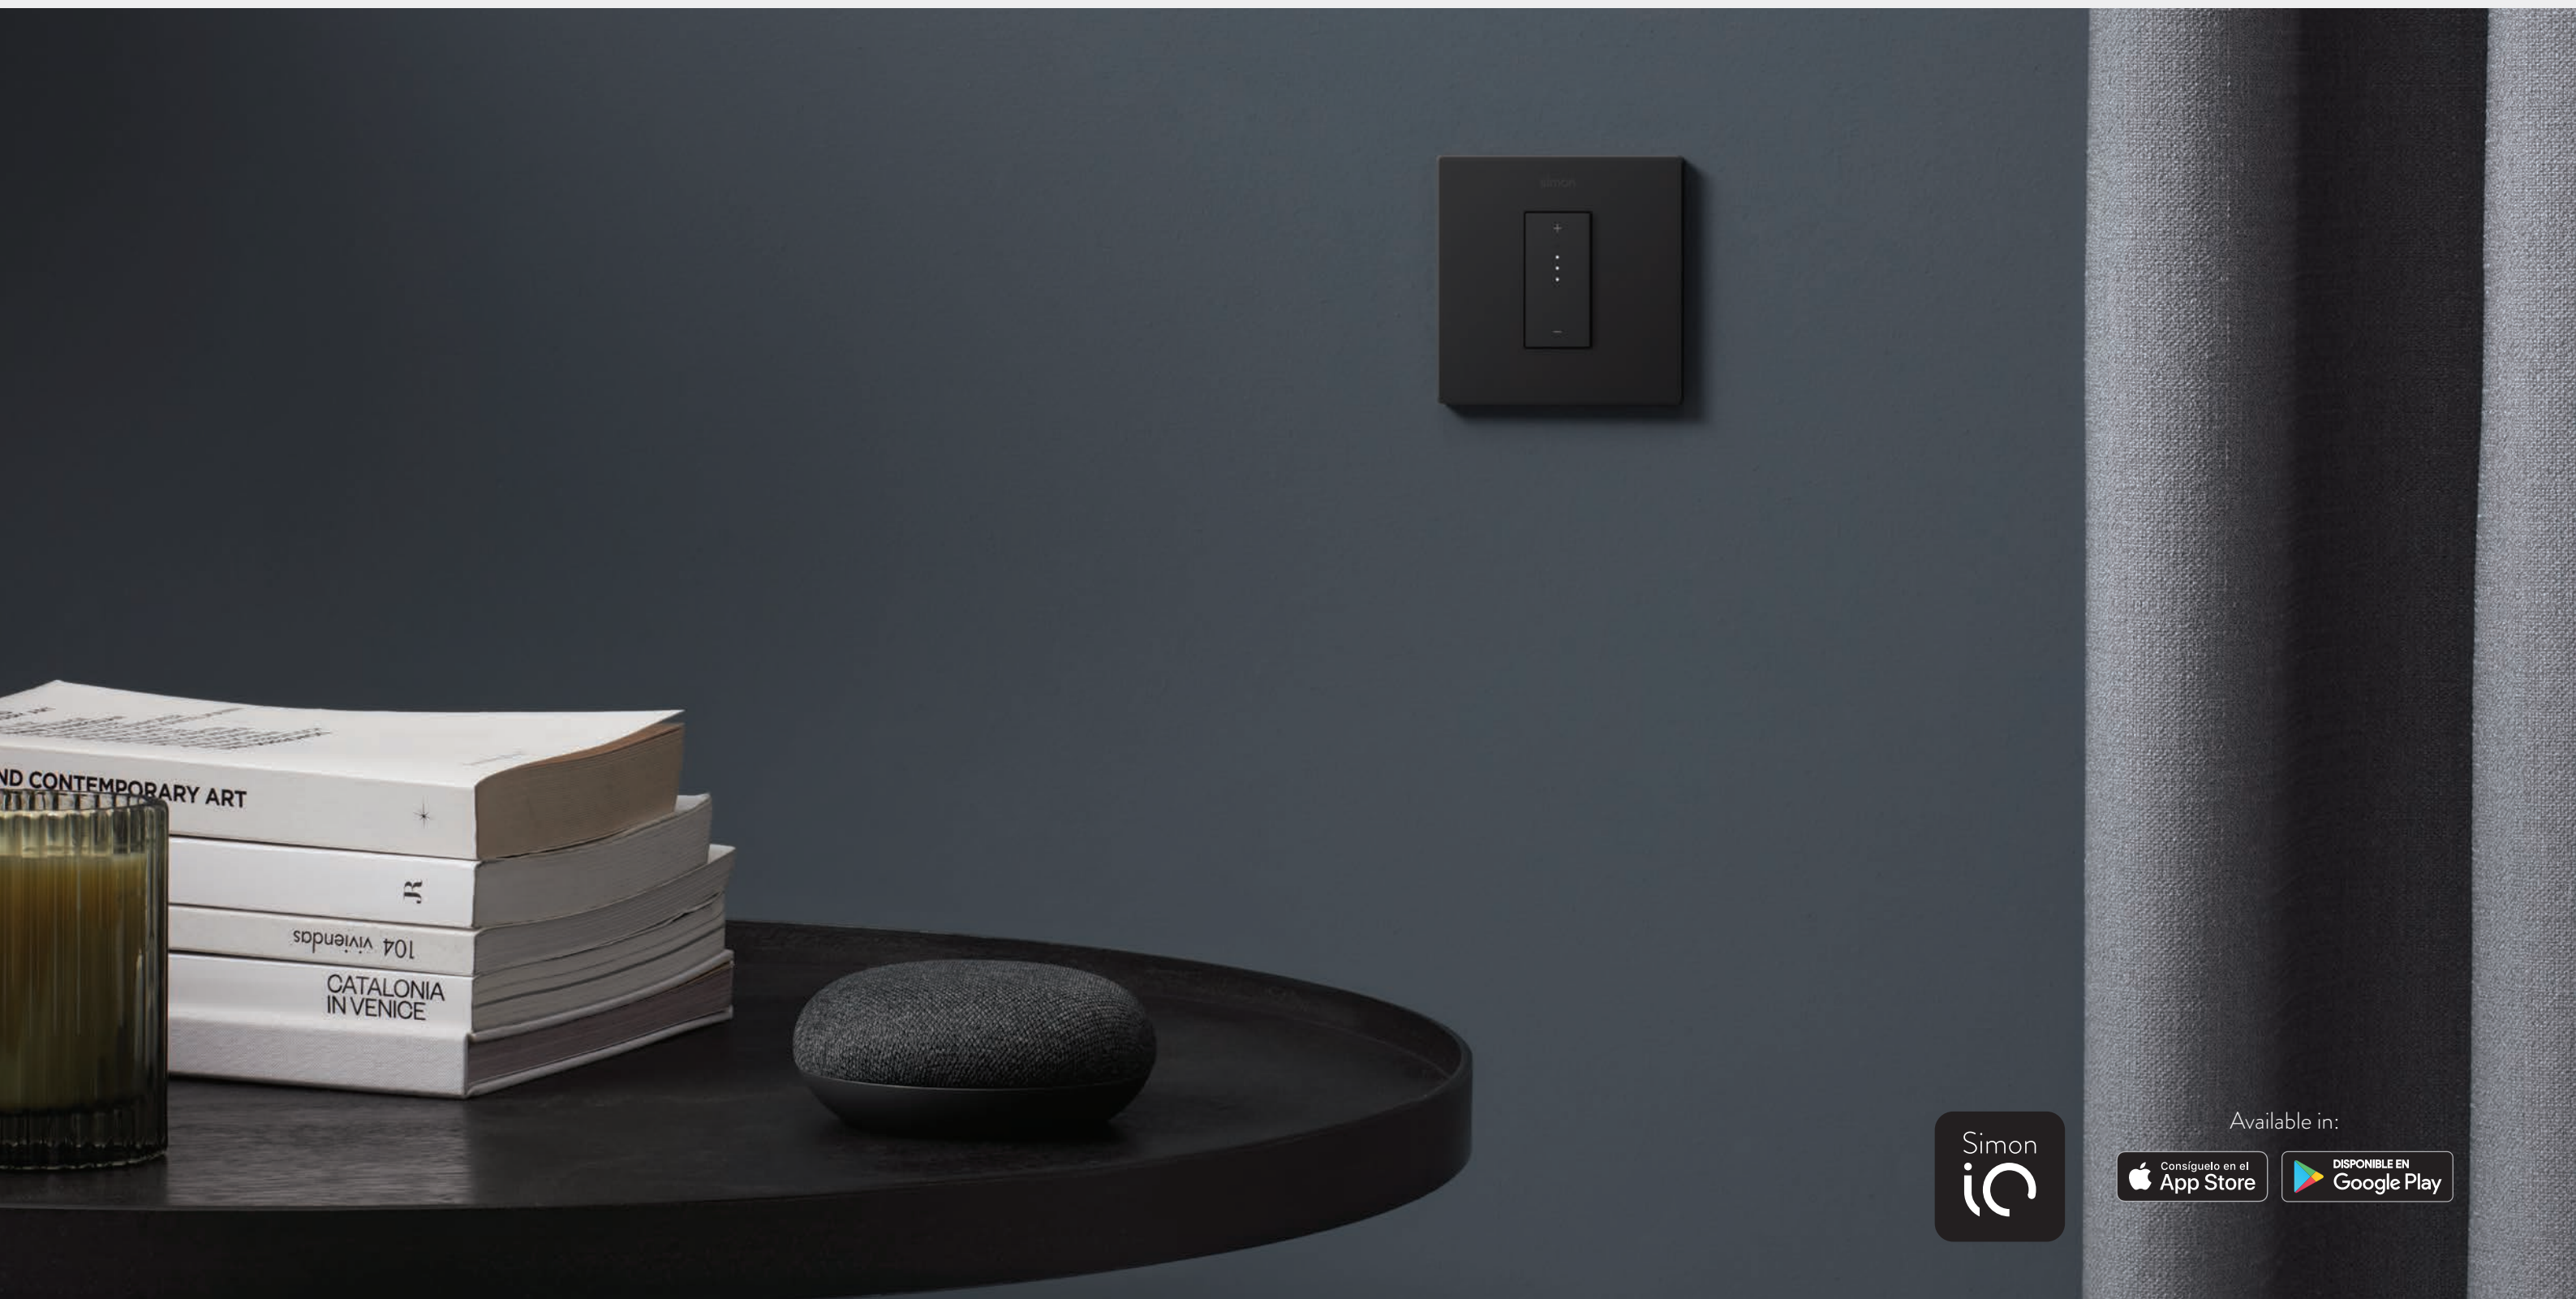

The cleaning process for Simon 270 is as minimal as its design. Thanks to the **patented magnetic auto-cover system**, the cover automatically moves when visible plugs aren't in use. This prevents dirt from accumulating inside, **making it easier to clean and improving durability**.

SIMPLIFIED CONNECTIVITY

For better comfort,
simplify connectivity.

Connectivity for well-being. Simon 270 works perfectly with **Amazon Alexa, Hey Google**, and, of course, you **even without a HUB**. That way, you can talk to all the **Simon 270 electronic devices**,

as long as they're connected to your Wi-Fi, without needing an additional installation. But, if you prefer, you can also control them through the Simon iO smartphone app.

Available in:

Simon 270 is the result of more than a century of simplification. Its 100% touch mechanism is available in two minimalist designs.

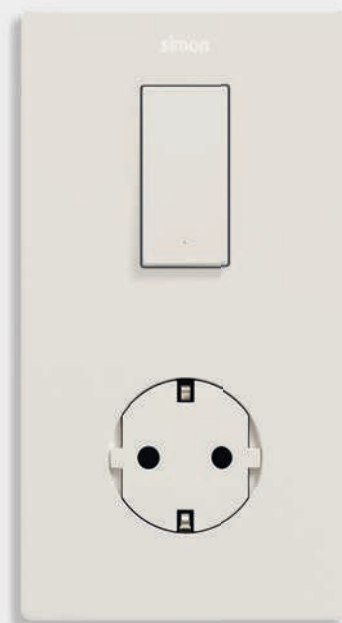

Connected versions are also available, which are installed the same way as a conventional mechanism and are synchronized with your mobile phone through the Simon iO app or a voice assistant.

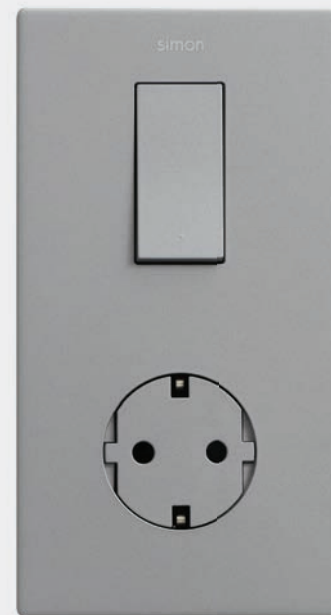

For a better appearance,
simplify the finishes.

The 270 collection offers a range of colours and finishes intended to fit with any style. They blend in perfectly with any kind of materials, furniture or

décor. They're more than just part of your space, they help create your environment.

CONNECTIVITY

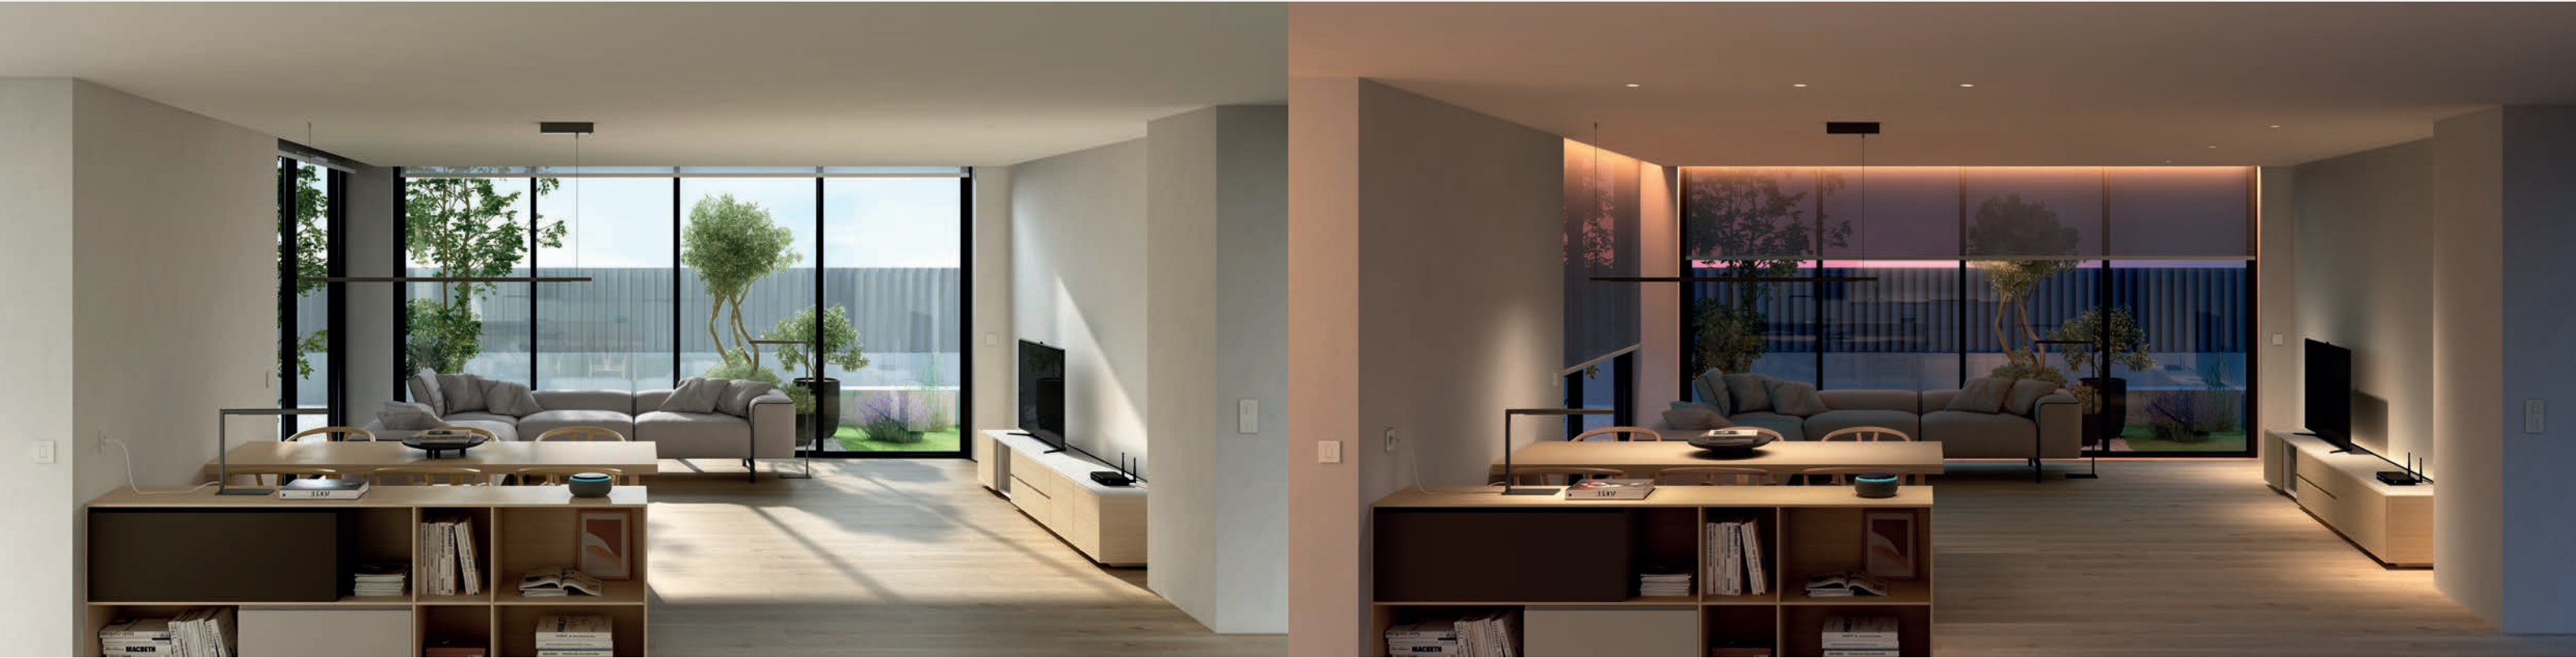

For better control,
simplify accessibility.

FEEL THE SPACE

A space is only as alive as the people who live in it. Make **it connected, even without a HUB.** Simon 270 lets you create the right atmosphere for every moment, **controlling the natural or**

artificial lighting. Use standard wiring without buses or complex domotics boxes. For comfort, security and savings.

Connect to the Simon iO app and control your space. You don't even need a HUB. Just a router with a Wi-Fi connection is enough to create the atmosphere you need.

For better interaction,
simplify the connections.

Simplified connectivity without a HUB.

All the Simon 270 electronic devices are connected.

That makes them ideal for basic installations in your home, because they radically simplify connectivity. Just connect them to your Wi-Fi.

30

BENEFITS:

- All you need is iO devices with an integrated Wi-Fi connection, no HUB required*
- Interaction via the device, voice assistants and the Simon iO app
- Works with Hey Google and Amazon Alexa

* Up to 10 devices. Complete the connectivity with more features by adding a HUB.

FEATURES:

- Remote control of devices and presence simulation
- Blinds control
- Central blinds control
- Light dimming
- Control of plugged-in devices
- Additional features for your devices: power consumption control, switching-on ramps, pilot light signalling and timing

Better connectivity with HUB.

Complete your home's connectivity with more features by adding a HUB.

Besides all the features available without a HUB, you have:

BENEFITS:

- Complete experience customization
- Time scheduling
- Improved experience synchronization and speed
- Unlimited iO devices
- Keypads to launch experiences (p. 40)

* According to router availability.

FEATURES:

- **Experiences: Welcome - Everything off - Good morning - Sweet dreams...**
- **Time scheduling**
- **Remote control of devices and presence simulation**
- **Blinds control**
- **Central blinds control**
- **Lighting control**
- **2-way light switching**
- **Socket control**
- **Additional features for your devices: power consumption control, switching-on ramps, pilot light signalling and timing**

USE

- Centre push - ON-OFF.
- Upper/lower push - gradually raise or lower the brightness.
- Held press - continuously raise or lower.
- 8 brightness levels - 4 lit signals with 2 brightness levels each.

MORE FEATURES

- Switching-on ramp configuration.
- Soft dimming.
- Minimum and maximum brightness customization.

COMPATIBILITY

The switch lets you manually dim the light brightness. A very practical feature that also helps reduce energy consumption. It also incorporates iO technology so you can activate it through the Simon iO App and voice assistants. It's compatible with any type of luminaire or technology.

	Light bulb		3-wire phase cut
	LED Strip	PWM	
	Downlight	1-10V	
	Modular luminaire	DALI	

And then there was light. Just one switch can centralize the control of various blinds, shades, awnings, and curtains. But you can also control them individually from different switches.

Through the Simon iO app and voice assistants, you can set time schedules* or remotely simulate people's presence in your home.

* Function only available with HUB or Voice assistants.

The Simon 270 iO switch lets you control the load of a motor, light, or anything else you want. Using the Simon iO App and voice assistants,

you can **schedule turning-on times** to avoid unnecessary light use, or delay turning on and off.

Simon 270 is available for various **socket outlets** and socket shapes. The Icon design has connected versions that incorporate iO technology. With the Simon iO App, you can analyse **light consumption**.

And with voice assistants or the Simon iO HUB, you can schedule on and off times or associate them with customized experiences*.

* Function only available with HUB or Voice assistants.

iO MASTER DIMMER SWITCH
Dim the light in your rooms from more than one place.

iO MASTER BLINDS SWITCH
Centralise and switch all the blinds in your home.

iO MASTER SWITCH
Send simultaneous orders to other iO mechanisms.

All under your command. These mechanisms give you central control, even for different devices, just by pressing a rocker.

That way, you can, for example, dim lights or control blinds from different parts of your house... or all in one place.

For a better experience,
simplify command.

KEYPAD FOR FOUR EXPERIENCES

KEYPAD FOR TWO EXPERIENCES

Presenting the Master Experience Keypad.* Superior control to launch several actions at once, just by pressing a single rocker.

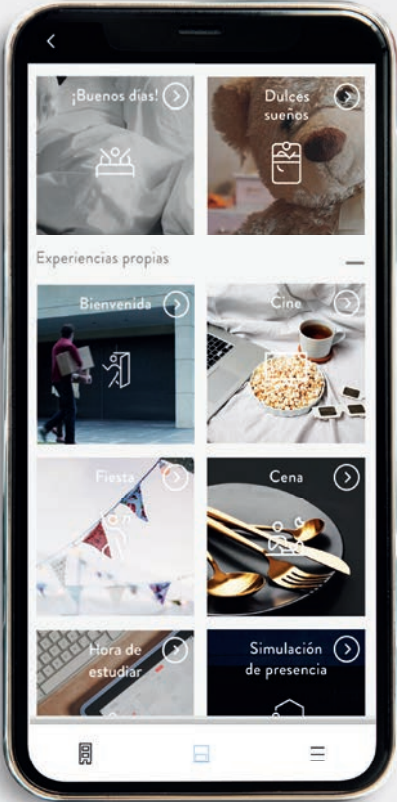

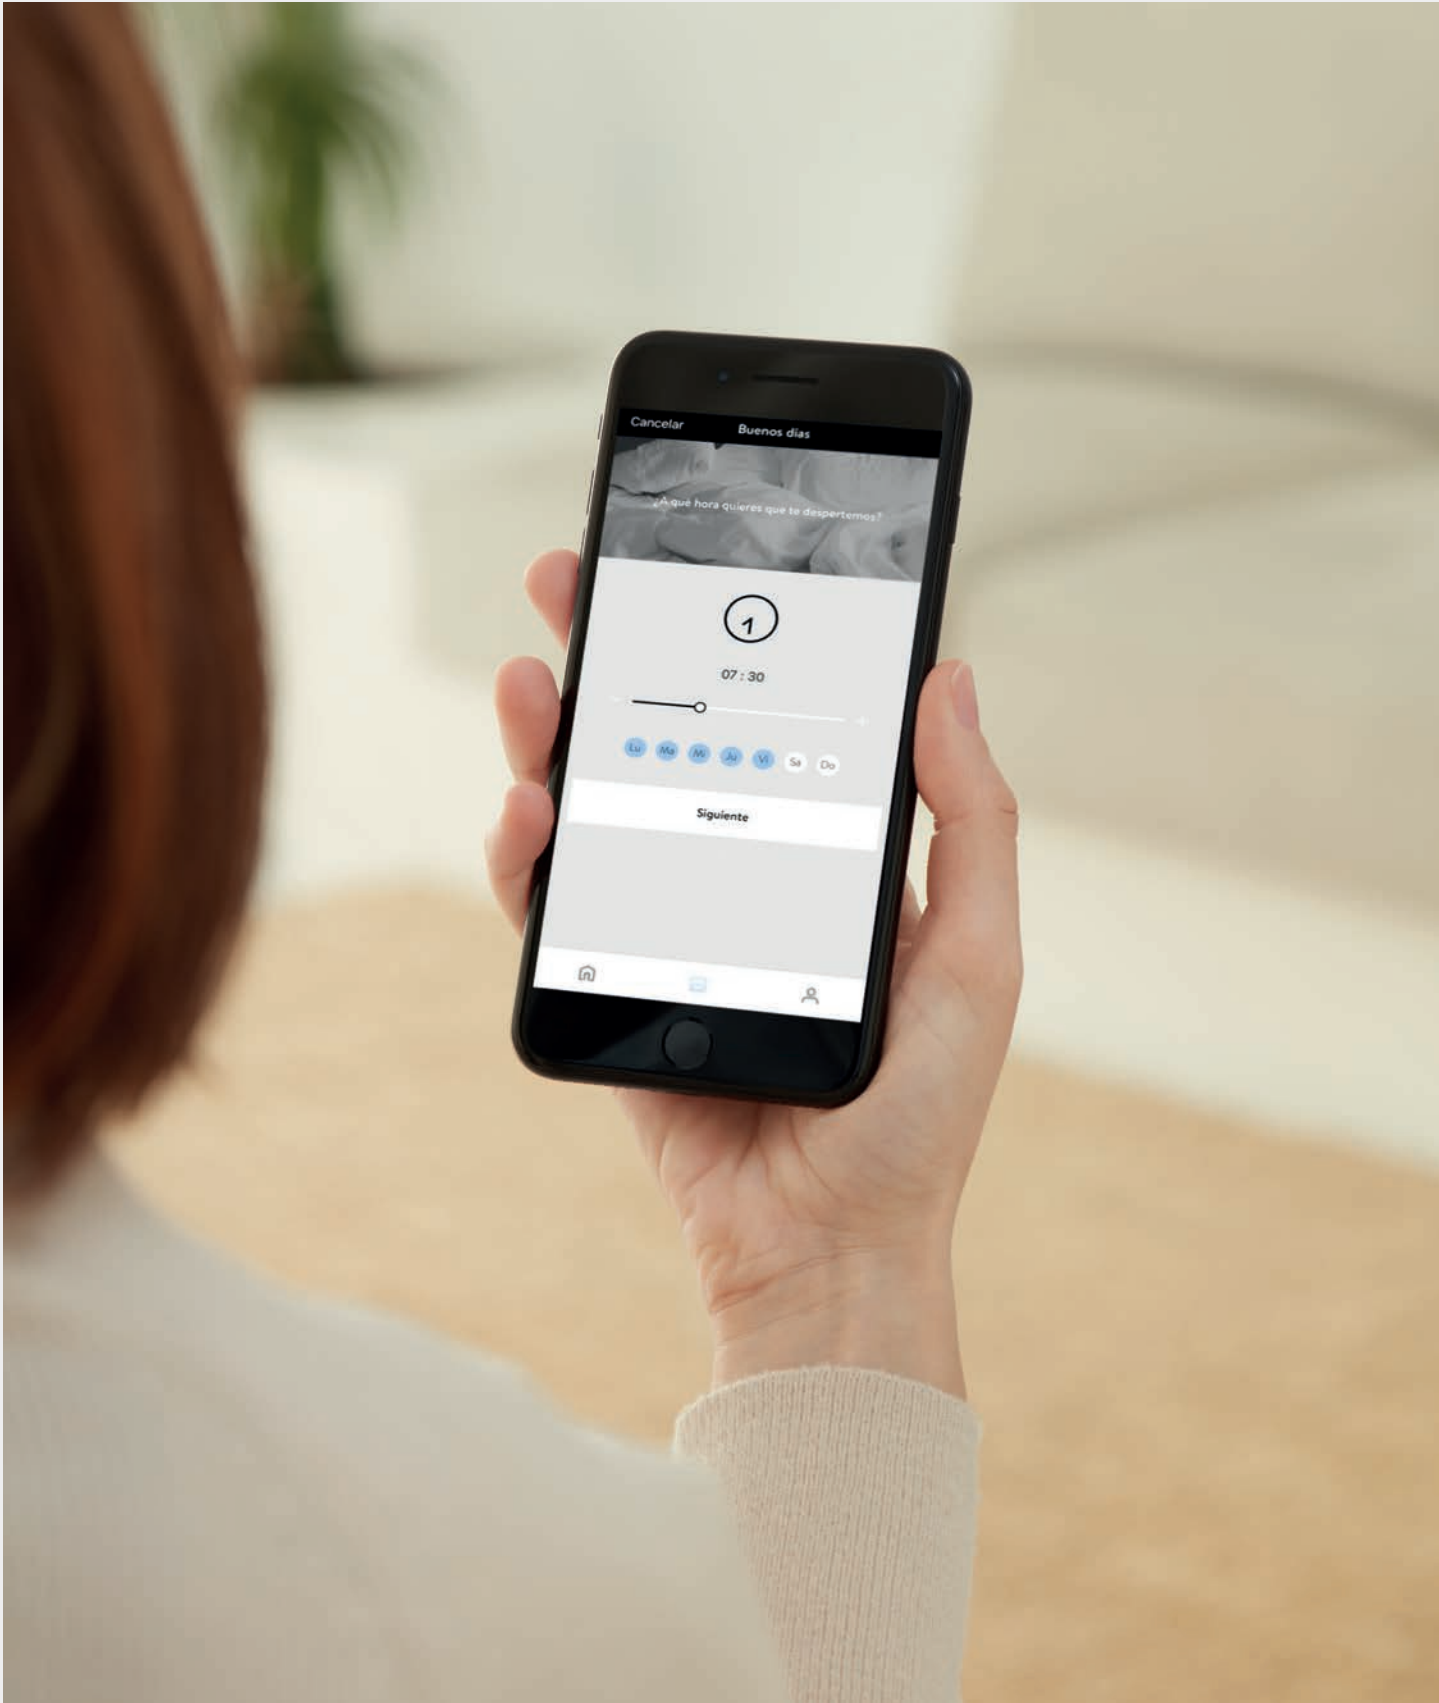

Configure it and enjoy a customized experience, with modes like Good Morning, Sweet Dreams, Presence simulation, Timed Experiences, and more.

*Only available with Simon iO HUB.

For better intuition,
simplify usability.

SIMON iO APP

Available in:

The Simon iO App is the definition of intelligence. It's an application that recognises all the iO devices in your home: blinds, switches, and thermostats.

It intuitively controls things like temperature and lighting, from your smartphone, no matter where you are.

For better performance,
simplify communication.

To change your home's environment at will, all you have to do is ask. Your voice controls all the connected Simon iO devices.

Create routines and specific commands. Anything is possible. iO technology installation. **Works with Hey Google and Amazon Alexa.**

CHARGING SOLUTIONS

For better integration,
simplify the design.

USB CHARGING

USB A+C
3.1A

USB A+A
2.1A

Don't run out of battery. Always have a USB charging point nearby, for your smartphone, tablet and other devices, with a range of modular and monoblock versions combined with other features.

 QUICKCHARGE

Charging technology that recognizes the device type and allows fast charging for connected devices up to 18W, with type-A or type-C ports.

 SMARTCHARGE

USB charger that charges at the required amperage, in the safest, fastest, and most efficient way possible.

MONOBLOCKS

2-WAY SWITCH + USB A
2.1A

SOCKET + 2 USB

All for one and one for all. Monoblock modules are preconfigured kits that combine various features in a single block.

They're installed as a unit and don't require additional frames. The fusion of features allows a clean appearance with optimised dimensions.

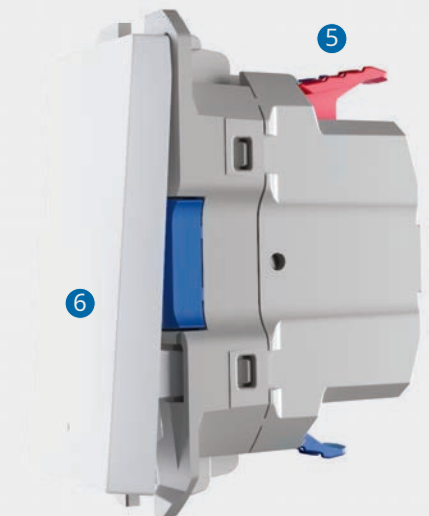

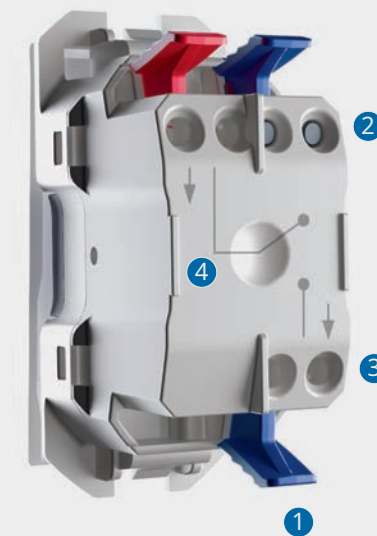

INSTALLATION

For a better installation,
simplify the process.

SIMPLIFIED INSTALLATION

The simplification of Simon 270 includes the installation process, too. The electrical connections and mechanical fasteners have been improved, and they include an easy-to-place metal frame-holder.

MECHANISM

1. Ergonomic connection levers to facilitate installation and maintenance.
2. Electrical connections are fast, secure and reliable.
3. Double-entry terminals for bridging multiple mechanisms.
4. Outdoor installation diagram.
5. User-friendly coloured levers in the mechanisms.
6. All mechanisms include a rocker.

SOCKET OUTLET

1. Single-side wire input.
2. Fast terminal connection using screws.
3. Supplied with loosened screws.
4. Walls separating terminals.
5. Outdoor installation diagram.
6. All mechanisms include a pre-clipped cover.

SIMPLIFIED INSTALLATION

MULTIPLE FRAME-HOLDER

For better results,
simplify alignment.

The **metal** multiple frame-holders ensure a **perfectly aligned** installation that guarantees safety and **robustness**. With precise snap-fit and **easy installation**, as well as rigid support for a perfect finish on the wall.

SURFACE MOUNTING

No walls are off limits. Simon 270 **has surface-mount boxes, which are flatter and more compact**, perfect for walls that don't allow recessed mounting or spaces where an industrial appearance is desirable.

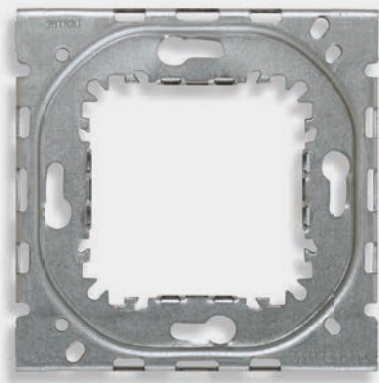

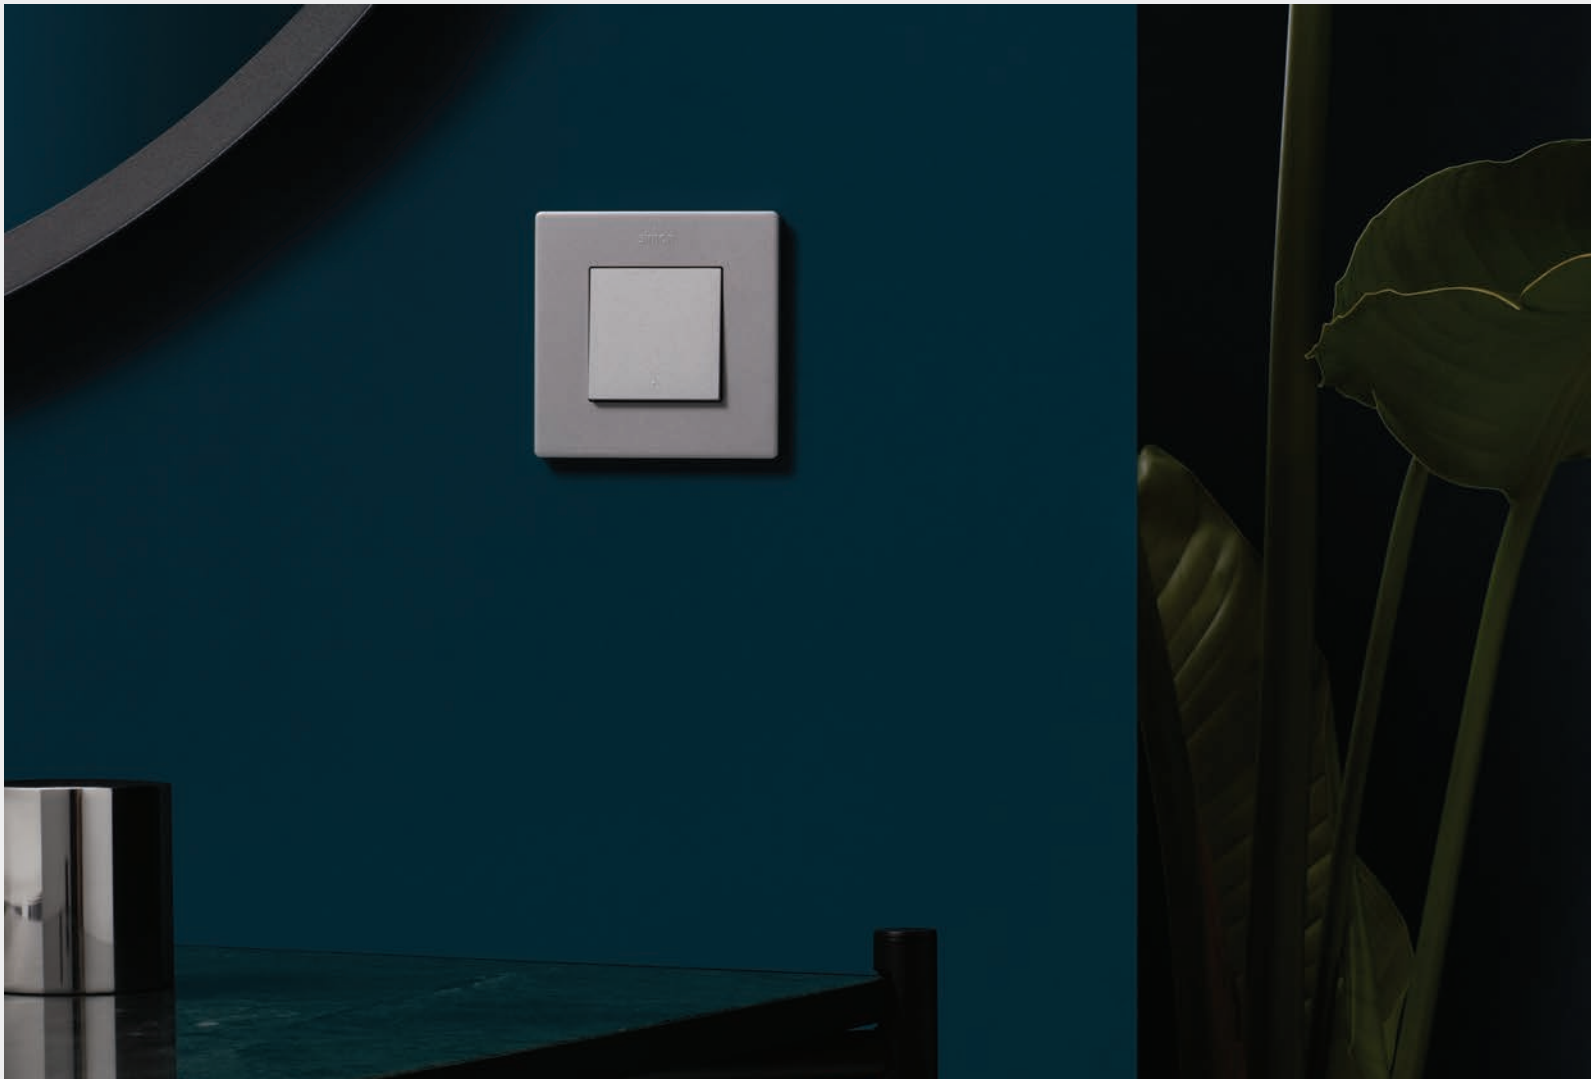

MECHANISM

FRAME + ROCKER
OR FRAME-HOLDER

FRAME-HOLDER

The whole collection is made up of three main elements: the mechanisms, the frames and the frame-holders.

Both the frames and frame-holders are modular, so they can be configured with the desired features.

For a better planet, simplify the packaging.

Simplification also means minimising environmental impact. That's why we've removed the plastic from all the packaging in the collection. For the first time, they're printed with less ink, with only small

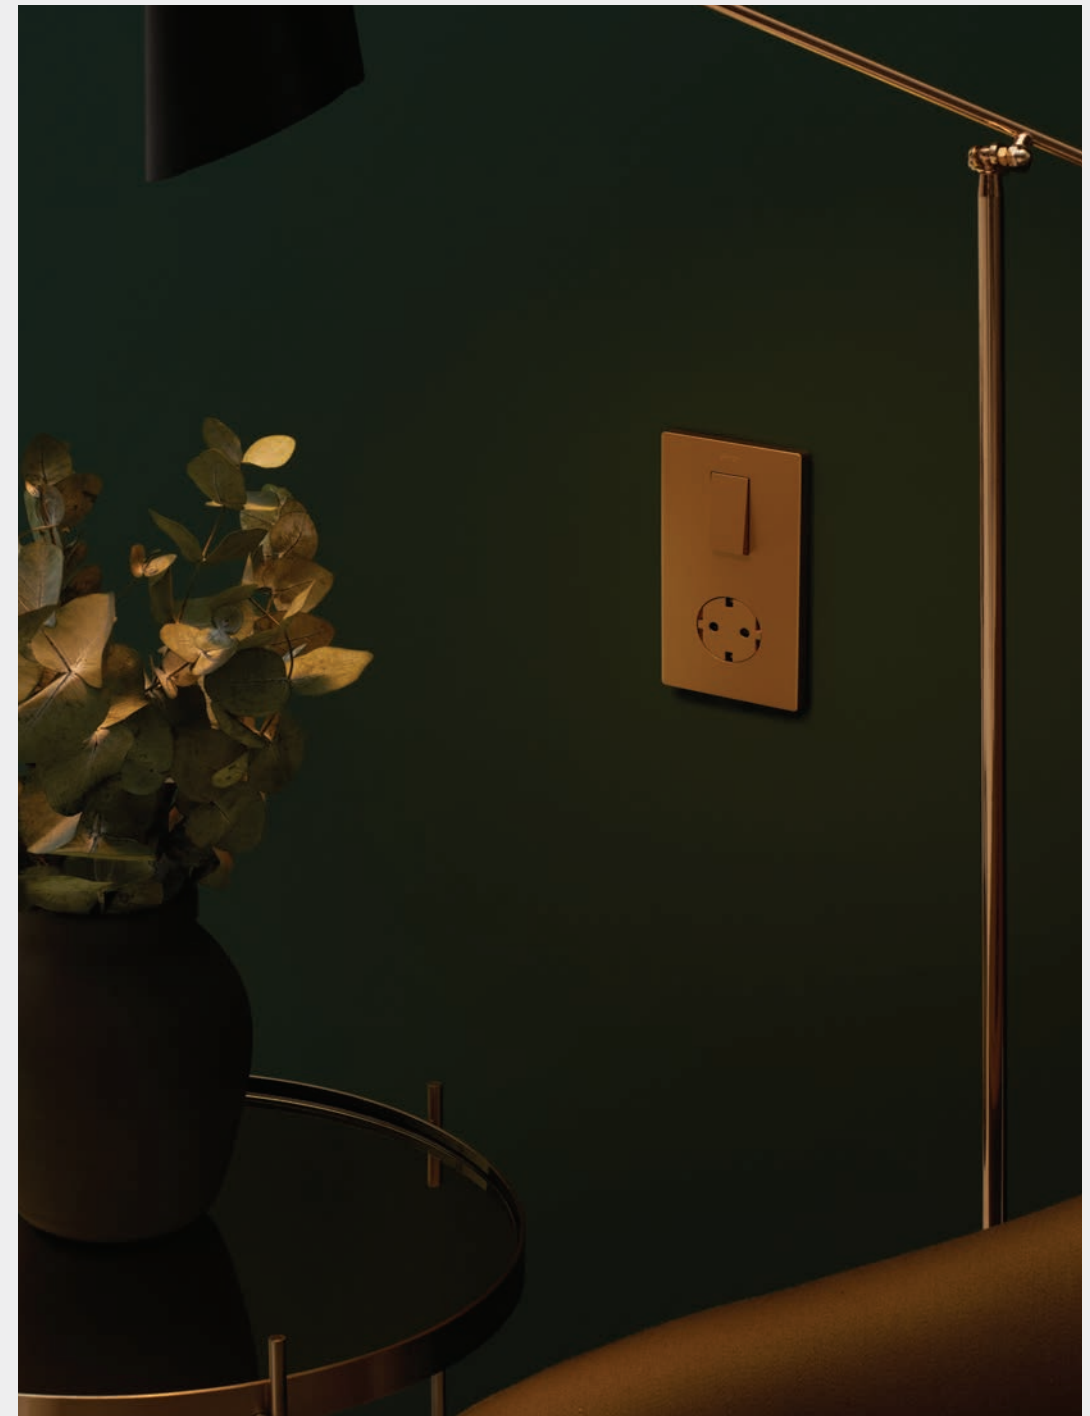

details in blue, avoiding single colour printing. Plus, they're made with 100% recycled materials. A new concept that's simpler, more honest, and more environmentally friendly.

COMPOSITIONS

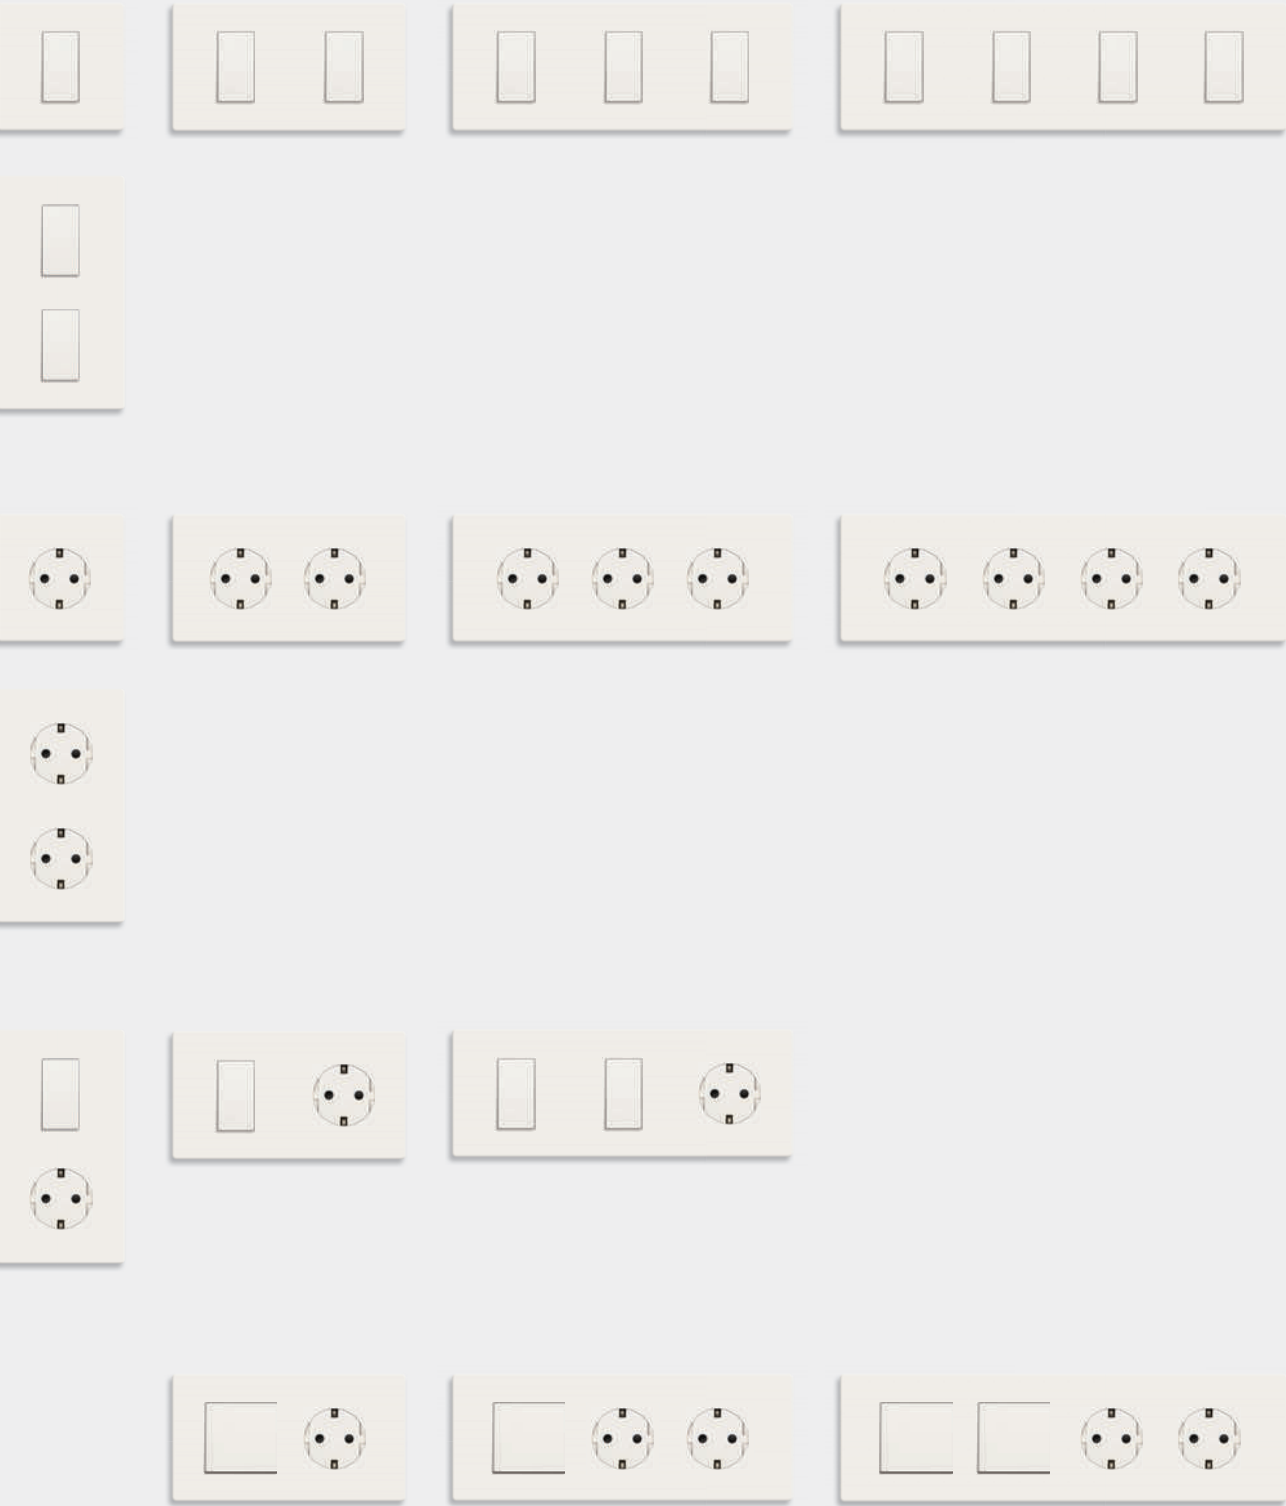

For better versatility,
simplify customization.

The Simon 270 collection offers infinite possibilities. Customize the modules however you want. You can combine features using the available frames.

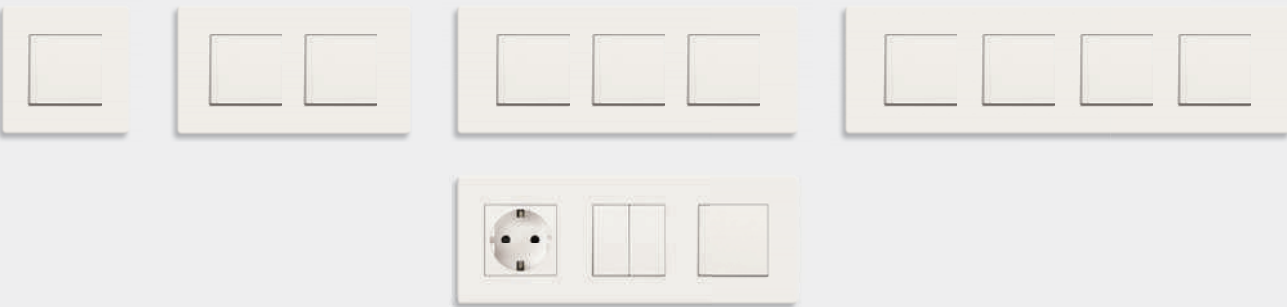

Create the composition that works best for your space's needs.

Minima Design Frames

You can exchange the switches for other features in the collection: socket outlets, USB, master switches, dimmable, blinds or iO switches...
